Summary of compliance with National Differences (List of countries addressed): N/A																	
☒ The product fulfils the requirements of <u>IEC 62619: 2022, EN IEC 62619:2022</u>																	

Use of uncertainty of measurement for decisions on conformity (decision rule) :

☒ No decision rule is specified by the IEC standard, when comparing the measurement result with the applicable limit according to the specification in that standard. The decisions on conformity are made without applying the measurement uncertainty ("simple acceptance" decision rule, previously known as "accuracy method").

☐ Other: ... (to be specified, for example when required by the standard or client, or if national accreditation requirements apply)

Information on uncertainty of measurement:

The uncertainties of measurement are calculated by the laboratory based on application of criteria given by OD-5014 for test equipment and application of test methods, decision sheets and operational procedures of IECEE.

IEC Guide 115 provides guidance on the application of measurement uncertainty principles and applying the decision rule when reporting test results within IECEE scheme, noting that the reporting of the measurement uncertainty for measurements is not necessary unless required by the test standard or customer.

Calculations leading to the reported values are on file with the NCB and testing laboratory that conducted the testing.

General product information and other remarks:

Product description:

1. The rechargeable Li-ion battery System is used for energy storage system, which include 16 cells connected with 16S1P.
2. The rechargeable Li-ion battery System gets the signal and data information of cell voltage and temperature through the BMS board.
3. The battery system has overcharge, over-discharge, over current and short-circuits proof circuit.
4. The BMS functional safety was evaluated according to ISO 13849-1 by TÜV Rheinland.
5. Suitable isolated switch and overcurrent protection device should be provided in end-installation.
6. The rechargeable Li-ion battery System should be satisfied with suitable installation standards in the end use area.
7. The two models have the same electrical performance, the difference between these two models is that FB-L-5.12-EU-Pro has an additional heating film configuration compared to FB-L-5.12-EU. The internal structure differences of products are detailed in PD documents.

The system diagram block is outlined as below:

	Materials be tested at a thickness equal to the smallest thickness used in the application and classified in accordance with IEC 60695-11-10..... :		N/A
7.4	Electric insulation check during transport and installation		P
	Hazardous live parts be covered or insulated against contact with the personnel during transport and installation.	Considered	P
	Insulation resistance test in an ambient temperature of 25 °C ± 5 °C tested in accordance with IEC 62133:2017, 5.2.		P
	Ambient (°C); measured insulation resistance (MΩ); $\geq 5 \text{ M}\Omega$:		P
7.5	Charging procedures for test purposes		P
	Prior to charging, the DUT have been discharged at 20 °C ± 5 °C at a constant current of 0,2 It A down to a specified final voltage	Considered	P
	Unless otherwise stated, the DUT is then charged in an ambient temperature of 25 °C ± 5 °C, using the method specified by the manufacturer.		P
7.6	Protection against short circuit during transport and installation		P

IEC 63056			
Clause	Requirement + Test	Result - Remark	Verdict
	A safeguard is provided by the battery system manufacturer to reduce the risk of short circuit for personnel at the time of electrical installation or transport.		P
	Where the battery pack is divided into parts for the purpose of transportation, protective safeguards shall be provided not only for the battery system, but also for each part.		P
	Short circuit the DUT with total external resistance of $(30 \text{ m}\Omega \pm 10 \text{ m}\Omega) \times \text{module configuration}$ (= number of series connections / number of parallel connections) or less than 5 m Ω , whichever is higher, and less than 100 m Ω .		—
	Results: no rupture, no fire, no explosion	See Table 7.6	P
7.7	Protection for reverse connection		N/A
	When a battery system has multiple battery packs or modules, the battery system shall remain in a safe condition at the time of installation, even if one of the battery packs or modules is connected with opposite polarity to the others.	The products could not connect with opposite polarity to the others.	N/A
	A DUT has a feature that prevents a reverse connection, or when modules or battery packs are connected in the battery system with the BMS at the factory, test is not required.		N/A
	Test the battery system with one module reverse connected.		—
	Results: no rupture, no fire, no explosion		P
7.8	Overdischarge control of voltage (battery system)		P
	The BMS shall control the cell voltage during discharging above the lower limit discharging voltage of the cells.		P
	Monitor the cells voltage while overdischarge the battery system or part of system.		—
	Results: BMS interrupt the overdischarging current by an automatic disconnect of the main contactors :	See Table 7.8	P
7.9	Drop test		P
7.9.1	General		P
	This test is performed to simulate a drop during installation and maintenance		P
7.9.2	Whole drop test (for DUT $\leq$ 50kg)	Battery Pack: 45.8kg	P

IEC 63056			
Clause	Requirement + Test	Result - Remark	Verdict
	The DUT is dropped one time from a height shown in Table 2 onto a flat concrete or metal floor.	Battery Pack: 50cm	P
	Results: no fire, no explosion..... :	See Table 7.9	P
7.9.3	Edge and corner drop test (for DUT > 50kg)		N/A
	Test arrangements as shown in Figure 3, Figure 4 and Figure 5. The DUT is dropped two times from a height shown in Table 2 onto a flat concrete or metal floor, with reproducible impact points for the shortest edge drop impact and the corner impacted.		N/A

DUT	Ambient (25°C ± 5°C)	OCV at start of test (V dc)	Max discharge current(A)	Maximum Case Temperature Rise ΔT (°C)	Test termination	Results
A004087101-001	25.2	53.7	888	--	B	C, F
Supplementary information: The fuse was break immediately after short circuit, and there is no obvious temperature rise during testing. A - The test was completed after 6 h; B - The test was completed after the cell casing cooled to 20% of the maximum temperature rise Results: C - No fire or Explosion; D - Fire; E - Explosion; F - Other (Please explain): Protected by the overcurrent device.

A004087101-001	25.5	52.7	20	100.0	2.933	A
Supplementary information: Results: A - The BMS interrupt the over discharging current by an automatic disconnect of the main contactors before the cell voltage dropped below lower limit discharging voltage of the cell. B - Measured minimum cell voltage less than lower limit discharging voltage of the cell.
